

# Standard Specification for Zirconium and Zirconium Alloy Strip, Sheet, and Plate<sup>1</sup>

This standard is issued under the fixed designation B 551/B 551M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reappraisal. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reappraisal.

## 1. Scope

1.1 This specification<sup>2</sup> covers five grades of zirconium strip, sheet, and plate.

1.2 Unless a single unit is used, for example corrosion mass gain in  $\text{mg}/\text{dm}^2$ , the values stated in either inch-pound or SI units are to be regarded separately as standard. The values stated in each system are not exact equivalents; therefore each system must be used independently of the other. SI values cannot be mixed with inch-pound values.

1.3 The following precautionary caveat pertains only to the test method portions of this specification: *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

## 2. Referenced Documents

2.1 *ASTM Standards*:<sup>3</sup>

E 8 Test Methods for Tension Testing of Metallic Materials

E 29 Practice for Using Significant Digits in Test Data to Determine Conformance with Specifications

## 3. Terminology

3.1 *Definitions of Terms Specific to This Standard*:

3.1.1 *annealed*—denotes material that exhibits a recrystallized grain structure.

3.2 *Lot Definitions*:

3.2.1 *castings, n*—a lot shall consist of all castings produced from the same pour.

3.2.2 *ingot, n*—no definition required.

3.2.3 *rounds, flats, tubes, and wrought powder metallurgical products (single definition, common to nuclear and non-*

*nuclear standards)*—a lot shall consist of a material of the same size, shape, condition, and finish produced from the same ingot or powder blend by the same reduction schedule and the same heat treatment parameters. Unless otherwise agreed between manufacturer and purchaser, a lot shall be limited to the product of an 8 h period for final continuous anneal, or to a single furnace load for final batch anneal.

3.2.4 *sponge, n*—a lot shall consist of a single blend produced at one time.

3.2.5 *weld fittings, n*—definition is to be mutually agreed upon between manufacturer and the purchaser.

## 4. Classification

4.1 The strip, sheet, or plate is to be furnished in five grades as follows:

4.1.1 *Grade R60700*—Low oxygen zirconium.

4.1.2 *Grade R60702*—Unalloyed zirconium.

4.1.3 *Grade R60704*—Zirconium-tin.

4.1.4 *Grade R60705*—Zirconium-niobium.

4.1.5 *Grade R60706*—Zirconium-niobium.

## 5. Ordering Information

5.1 Orders for material under this specification should include the following information:

5.1.1 Quantity (weight or number of pieces),

5.1.2 Name of material (zirconium strip, sheet, or plate),

5.1.3 Grade number (see Section 4),

5.1.4 ASTM designation and year of issue,

5.1.5 Finish and appearance (Section 10), and

5.1.6 Additions to the specification and supplementary requirements, if required.

NOTE 1—A typical ordering description is as follows: 9000-lb [5000 kg] zirconium sheet, 0.098 in. [2.5 mm] by 12 in. [300 mm] by 144 in. [3.5 m], ASTM B 551 - 01, Grade R60705.

## 6. Materials and Manufacture

6.1 The strip, sheet, and plate covered by this specification shall be formed with conventional forging and rolling equipment found in primary ferrous and nonferrous metal plants.

6.2 The strip, sheet, and plate shall be supplied in the recrystallized annealed condition.

<sup>1</sup> This specification is under the jurisdiction of ASTM Committee B10 on Reactive and Refractory Metals and Alloys and is the direct responsibility of Subcommittee B10.02 on Zirconium and Hafnium.

Current edition approved May 1, 2004. Published May 2004. Originally approved in 1971. Last previous edition approved in 2002 as B 551/B 551M – 02.

<sup>2</sup> For ASME Boiler and Pressure Vessel Code applications, see related Specification SB-551 in Section II of that Code.

<sup>3</sup> For referenced ASTM standards, visit the ASTM website, [www.astm.org](http://www.astm.org), or contact ASTM Customer Service at [service@astm.org](mailto:service@astm.org). For *Annual Book of ASTM Standards* volume information, refer to the standard's Document Summary page on the ASTM website.

**7. Chemical Composition**

7.1 The material shall conform to the requirements as to chemical composition prescribed in Table 1.

7.2 The manufacturer’s ingot analysis shall be considered the chemical analysis for strip, sheet, and plate, except for hydrogen and nitrogen, which shall be determined on the finished product.

7.3 When requested by the purchaser and stated in the purchase order, a product analysis for any elements listed in Table 1 shall be made on the finished product.

7.3.1 The manufacturer’s analysis shall be considered as verified if the check analysis confirms the manufacturer’s reported values within the tolerances prescribed in Table 2.

**8. Mechanical Properties**

8.1 The material, as represented by the test specimens, shall conform to the tensile properties prescribed in Table 3.

8.2 For strip and sheet, the bend test specimen shall stand being bent at ambient temperature through an angle of 105° without fracture in the outside of the bent portion. The bend shall be made on a radius equal to that shown in Table 3 for the applicable grade.

**9. Permissible Variations in Dimensions**

9.1 *Thickness*—The variation in thickness of strip, sheet, and plate are given in the following tables:

9.1.1 Hot- and cold-rolled sheet, Table 4.

9.1.2 Hot-rolled strip, Table 5.

9.1.3 Cold-rolled strip, Table 6.

9.1.4 Plate, Table 7.

9.2 *Width and Length*—The variation in width and length are given in the following tables:

9.2.1 Hot- and cold-rolled sheet, Table 8.

9.2.2 Hot-rolled strip, Tables 9 and 10.

9.2.3 Cold-rolled strip, Tables 11 and 10.

9.2.4 Plate, Table 12.

9.3 *Crown Tolerances*—The variations in crown tolerances are given in the following tables:

9.3.1 Hot-rolled strip, Table 13.

9.3.2 Cold-rolled strip, Table 14.

**TABLE 2 Permissible Variation in Check Analysis Between Different Laboratories**

Element	Permissible Variation in Product Analysis, %
Hydrogen	0.002
Nitrogen	0.01
Carbon	0.01
Hafnium	0.1
Iron + chromium	0.025
Tin	0.05
Niobium	0.05
Oxygen	0.02

9.4 *Camber Tolerances*—The variations in camber tolerances are given in the following tables.

9.4.1 Hot- and cold-rolled sheet, Table 15.

9.4.2 Hot- and cold-rolled strip, Table 16.

9.4.3 Plate, Table 17.

9.5 *Diameter*—The variation in diameter tolerance for circular plates is given in Table 18.

9.6 *Weight*—The permissible variation in weight for zirconium sheet is given in Table 19.

9.7 *Flatness*—The permissible variation from a flat surface for zirconium plate is given in Table 20.

**10. Workmanship, Finish and Appearance**

10.1 Flat-rolled product in the hot-rolled condition shall be furnished with one of the following finishes as designated on the order.

10.1.1 Not descaled,

10.1.2 Mechanically descaled,

10.1.3 Mechanically descaled and pickled, or

10.1.4 As-ground.

10.2 Material in the cold-rolled condition shall be furnished with a bright cold-rolled finish, or finished by mechanical or chemical methods.

10.3 The following types of edges are available:

10.3.1 Mill edge,

10.3.2 Slit edge,

10.3.3 Sheared edge, and

10.3.4 Machined edge.

**TABLE 1 Chemical Requirements<sup>A</sup>**

Element	Composition, %				
	Grades				
	R60700	R60702	R60704	R60705	R60706
Zirconium + hafnium, min	99.2	99.2	97.5	95.5	95.5
Hafnium, max	4.5	4.5	4.5	4.5	4.5
Iron + chromium	0.2 max	0.2 max	0.2 to 0.4	0.2 max	0.2 max
Tin	...	...	1.0 to 2.0	...	...
Hydrogen, max	0.005	0.005	0.005	0.005	0.005
Nitrogen, max	0.025	0.025	0.025	0.025	0.025
Carbon, max	0.05	0.05	0.05	0.05	0.05
Niobium	...	...	...	2.0 to 3.0	2.0 to 3.0
Oxygen, max	0.10	0.16	0.18	0.18	0.16

<sup>A</sup>By agreement between the purchaser and the manufacturer, analysis may be required and limits established for elements and compounds not specified in the table of chemical composition.

**TABLE 3 Tensile Requirements**

	Grades				
	R60700	R60702	R60704	R60705	R60706
Tensile strength, min, ksi [MPa]	...	55 [380]	60 [415]	80 [550]	74 [510]
Yield strength, min, ksi [MPa]	...	30 [205]	35 [240]	55 [380]	50 [345]
Tensile strength, max, ksi [MPa]	55 [380]	...	...	...	...
Yield strength, max, ksi [MPa]	44 [305]	...	...	...	...
Elongation in 2 in. or 50 mm, min, % <sup>A</sup>	20	16	14	16	14
Bend test radius <sup>B</sup>	5T	5T	5T	3T	2.5T

<sup>A</sup>When a sub-size specimen is used, the gage length shall be as specified in Test Methods E 8 for that specimen.

<sup>B</sup>T equals the thickness of the bend test specimen. Bend tests are not applicable to material over 0.187 in. [4.8 mm] in thickness.

**TABLE 4 Permissible Variations in Thickness of Hot- and Cold-Rolled Zirconium Sheet<sup>A</sup>**

Specified Thickness, in. [mm]	Permissible Variations in Thickness, plus and minus, in. [mm]
0.146–0.1875, excl [3.7–4.8]	0.014 [0.35]
0.131–0.145 [3.31–3.69]	0.012 [0.30]
0.115–0.130 [2.91–3.30]	0.010 [0.25]

0.005 [0.13]	0.001 [0.025]

<sup>A</sup>Thickness measurements are taken at least 3/8 in. [9.5 mm] in from edge.

**TABLE 5 Permissible Variations in Thickness of Hot-Rolled Zirconium Strip**

Specified Width, in. [mm]	Variation from Specified Thickness for Widths Given, Over and Under, in <sup>A</sup> [mm]	
	0.187–0.118, incl	0.119–0.083, incl
To 3½ incl	0.006 [0.15]	0.005 [0.13]
Over 3½ –12, incl	0.007 [0.18]	0.006 [0.15]
Over 12–18, incl	0.008 [0.20]	0.008 [0.20]
Over 18–24, incl	0.010 [0.25]	0.010 [0.25]

<sup>A</sup>Thickness measurements shall be taken 3/8 in. [9.5 mm] from edge. Tolerances do not include crown.

**11. Significance of Numerical Limits**

11.1 For the purpose of determining compliance with the specified limits for requirements of the properties listed in the following table, an observed value or a calculated value shall be rounded as indicated in accordance with the rounding methods of Practice E 29.

Property Rounded Unit for Observed or Calculated Value

Chemical composition and tolerances (when expressed as decimals) nearest unit in the last right-hand place of figures of the specified limit  
 Tensile strength and yield strength nearest 1000 psi (10 MPa)  
 Elongation nearest 1 %

**12. Number of Tests and Retests**

12.1 One longitudinal tension shall be made from each lot (see 13.1).

12.2 One chemistry test for hydrogen and nitrogen content shall be made from each lot of finished product (see 13.2).

12.3 Two bend tests, one in the longitudinal and one in the transverse direction, shall be made from each lot (see 8.2).

**12.4 Retests:**

12.4.1 If any sample or specimen exhibits obvious surface contamination or improper preparation disqualifying it as a truly representative sample, it shall be discarded and a new sample or specimen substituted.

12.4.2 If the results of any tests of any lot do not conform to the requirements specified, retests shall be made on additional sheet, strip, or plate of double the original number from the same lot, each of which shall conform to the requirements specified.

12.4.3 Retesting after failure of initial retests may be done only with the approval of the purchaser.

**13. Test Methods**

13.1 *Tension Tests*—Conduct the tension test in accordance with Test Methods E 8. Determine the yield strength by the offset (0.2 %) method. Determine the tensile properties using a strain rate of 0.003 to 0.007 in./in. [mm/mm]/min through the yield strength. After the yield strength has been exceeded, the cross-head speed may be increased to approximately 0.05 in./in. [mm/mm]/min to failure.

13.2 *Chemical Tests*—Conduct the chemical analysis by the standard techniques normally used by the manufacturer.

**TABLE 6 Permissible Variations in Thickness of Cold-Rolled Zirconium Strip**

NOTE 1—For thickness under 0.010 in. [0.25 mm] in widths to 16 in. [400 mm] a tolerance of  $\pm 10\%$  of the thickness shall apply; in widths over 16 [400 mm] to 24 in. [600 mm] incl, a tolerance of  $\pm 15\%$  of the thickness shall apply.

NOTE 2—Thickness measurements shall be taken  $\frac{3}{8}$  in. [9.5 mm] in from edge of the strip, except on widths less than 1 in. [2.5 mm] where the tolerances are applicable for measurements at all locations.

NOTE 3—The tolerances given in this table do not include crown tolerances.

<sup>A</sup>For circles, the plus tolerances for the specified thicknesses apply to the diameter of the circle corresponding to the width ranges shown. For plates of irregular shape, the plus thickness tolerances apply to the greatest width corresponding to the width ranges shown.

<sup>B</sup>For permissible variations on plates over 2 in. [50 mm] thick, the producer should be consulted.

## 14. Inspection

14.1 The manufacturer shall inspect the material covered by this specification prior to shipment and, on request, shall furnish the purchaser with certificates of test. If so specified in the purchase order, the purchaser or his representative may witness the testing and inspection of the material at the place of manufacturer. In such cases the purchaser shall state in his

**TABLE 8 Permissible Variations in Width and Length of Hot- and Cold-Rolled Zirconium Sheet**

purchase order which tests he desires to witness. The manufacturer shall give ample notice to the purchaser as to the time and place of the designated tests. If the purchaser's representative does not present himself at the time agreed upon for the testing, the manufacturer shall consider the requirement for purchaser's inspection at the place of manufacture to be waived.

14.2 The manufacturer shall afford the inspector representing the purchaser, without charge, all reasonable facilities to satisfy him that the material is being furnished in accordance with this specification. This inspection shall be so conducted as to not interfere unnecessarily with the operation of the works.

TABLE 9 Permissible Variations in Width of Hot-Rolled Zirconium Strip

Over 5–10, incl [1.5–3]	+½, –0 [+13, –0]
Over 10–20, incl [3–6.1]	+⅝, –0 [+16, –0]

## 15. Rejection

15.1 Rejection for failure of the material to meet the requirements of this specification shall be reported to the manufacturer within 60 calendar days from the receipt of the material by the purchaser. Unless otherwise specified, rejected material may be returned to the manufacturer at the manufacturer's expense, unless the purchaser receives, within three weeks of the notice of rejection, other instructions for disposition.

## 16. Certification

16.1 A producer or supplier shall furnish the purchaser with a certificate that the material was manufactured, sampled, tested, and inspected in accordance with this specification and has been found to meet the requirements. The certificate shall include a report of the test results.

## 17. Referee

17.1 In the event of disagreement between the manufacturer and the purchaser on the conformance of the material to the requirements of this specification or any special test specified by the purchaser, a mutually acceptable referee shall perform the tests in question. The results of the referee's testing shall be used in determining conformance of the material to this specification.

## 18. Product Marking

18.1 *Identification*—Unless otherwise specified, each plate, sheet, and strip shall be marked in the respective location indicated below, with the number of this specification, heat number, manufacturer's identification, and the nominal thickness. The characters shall be not less than ⅜ in. [9.52 mm] in height, shall be applied using a suitable marking fluid, and shall be capable of being removed with a hot alkaline cleaning solution without rubbing. The marking shall have no deleterious effect on the material or its performance. The characters shall be sufficiently stable to withstand ordinary handling.

18.1.1 Plate, flat sheet, and flat strip over 6 in. [150 mm] in width shall be marked in lengthwise rows of characters recurring at intervals not greater than 3 in. [75 mm], the rows being spaced not more than 1 in. [40 mm] apart and alternatively staggered. Heat numbers shall occur at least three times across the width of the material and at intervals not greater than 2 ft [0.6 m] along the length. As an option, when permitted by the purchaser, each plate, sheet, or cut length strip may be marked in at least one corner with the number of this specification, heat number, manufacturer's identification, and the nominal thickness in inches or millimetres as required.

18.1.2 Flat strip 6 in. [150 mm] and under in width shall be marked near one end.

18.1.3 Coiled sheet and strip shall be marked near the outside end of the coil.

## 19. Packaging and Package Marking

19.1 Unless otherwise specified, material purchased under this specification may be packaged for shipment either by boxing, crating, single boarding, burlapping, or with no protection in accordance with the manufacturer's standard practice.

## 20. Keywords

20.1 plate; sheet; strip; zirconium; zirconium alloy

**TABLE 15 Camber Tolerances for Hot- and Cold-Rolled Zirconium Sheet<sup>A</sup>**

Specified Width, in. [mm]	Tolerance per Unit Length of any 8 ft [24 m], in. [mm]
24–36, incl [600–900]	$\frac{1}{8}$ [3.2]
Over 36 [900]	$\frac{3}{32}$ [2.4]

<sup>A</sup>Camber is the greatest deviation of a side edge from a straight line, the measurement being taken on the concave side with a straightedge.

**TABLE 16 Camber Tolerance for Hot- and Cold-Rolled Zirconium Strip<sup>A</sup>**

Specified Width, in. [mm]	Tolerance, per Unit Length of any 8 ft [2.44 m], in. [mm]
To 1½, incl [38]	$\frac{1}{2}$ [13]
Over 1½ –24, incl [38–600]	$\frac{1}{4}$ [6.4]

<sup>A</sup>Camber is the deviation of a side edge from a straight line. The measurement is taken by placing an 8-ft [2.44 m] straight-edge on the concave side and measuring the greatest distance between the strip edge and the straight edge.

**TABLE 17 Camber Tolerance for Zirconium Plate<sup>A</sup>**

Tolerance:	$\frac{1}{8}$ in. [3.2 mm] × (number of meters/1.5) (number of feet of length/5)
------------	---

<sup>A</sup>Camber is the greatest deviation of a side edge from a straight line. The measurement is taken by placing a straightedge on the concave side and measuring the greatest distance between the plate edge and the straightedge.

**TABLE 18 Diameter Tolerances for Circular Plates**

Specified Diameter, in. [m]	Tolerance Over Specified Diameter for Given Diameter and Thickness (No Tolerance Under), in. [mm]		
	To $\frac{3}{8}$ [9.5], incl, in Thickness	$\frac{3}{8}$ to $\frac{5}{8}$ [9.5–16] excl, in Thickness	$\frac{5}{8}$ [16] and Over in Thickness <sup>A</sup>
To 60 [1.5], excl	$\frac{1}{4}$ [6.4]	$\frac{3}{8}$ [9.5]	$\frac{1}{2}$ [13]
60–84 [1.5–2.1], incl	$\frac{5}{16}$ [8.0]	$\frac{7}{16}$ [11]	$\frac{3}{16}$ [14]
84–108 [2.1–2.8], excl	$\frac{3}{8}$ [9.5]	$\frac{1}{2}$ [13]	$\frac{5}{8}$ [16]
108–130 [2.8–3.3], incl	$\frac{7}{16}$ [11]	$\frac{9}{16}$ [14]	$\frac{11}{16}$ [17.5]

<sup>A</sup>Circular and sketch plates over  $\frac{5}{8}$  in. [16 mm] in thickness are not commonly sheared and are machined or otherwise cut.

**TABLE 19 Permissible Variations in Weight of Hot- and Cold-Rolled Zirconium Sheet**

The actual weight of any one item on an ordered thickness and size in any finish is limited in overweight by the following tolerance:  
 Any item of 5 sheets or less or any item estimated to weigh 200 lb [100 kg] or less, may actually weigh as much as 10 % over the estimated weight.  
 Any item of more than 5 sheets and estimated to weigh more than 200 lb [100 kg] may actually weigh as much as 7½ % over the estimated weight.  
 There is no under tolerance in weight for zirconium sheets, under tolerance being restricted by the permissible thickness variations. Only random (or mill size) sheets may be ordered on a square foot [meter] basis, and the number of square feet [meter] shipped may exceed the number ordered by as much as 5 %

**TABLE 20 Permissible Variations From a Flat Surface for Annealed Zirconium Plate-inch [mm]**

NOTE 1—Variations in flatness apply to plates up to 15 ft [4.6 m] in length, or to any 15 ft [4.6 m] of longer plates.

NOTE 2—If the longer dimension is under 36 in. [1 m], the variation is not greater than 3/4 in. [6.4 mm].

NOTE 3—The shorter dimension specified is considered the width and the variation in flatness across the width does not exceed the tabular amount for that dimension.

NOTE 4—The maximum deviation from a flat surface does not customarily exceed the tabular tolerance for the longer dimension specified.

Specified Thickness, in. [mm]	Permissible Variations in Flatness, for Widths Given, Plus and Minus, in. [mm]

### SUPPLEMENTARY REQUIREMENTS

#### S.1 Additional Requirements for Material to be Used for Explosion Cladding

S1.1 These requirements apply exclusively for sheet and plate to be used for explosion cladding.

S1.2 These requirements apply only to Grades R60700 and R60702 and only in thicknesses ranging from 0.078 in. [2 mm] to 0.78 in. [20 mm] inclusive.

S1.3 Additional flatness requirements:

S1.3.1 The permissible variation in flatness for zirconium material grades R60700 and R60702 for explosion cladding applications shall be 1/2 that of the limits in Table 20. Localized flatness variations shall not exceed 0.12 in. [3 mm] in 39 in. [1 m], as measured using a straight edge placed (balanced) at any location on the plate surface.
